

If you are run Leaf and it is hanging on the splash screen.

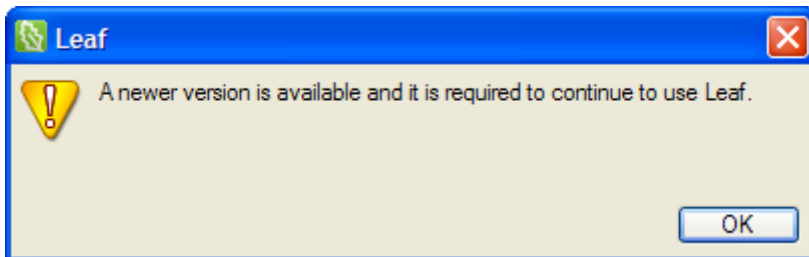

The problem is that the application is trying to present you with a dialog window asking you to upgrade, however, the splash screen is covering this window dialog so it is not visible.

If you look on your task bar you should see another icon for another Leaf widow.

If you press this window it should bring the upgrade dialog to the front.

If this does not work, please download the latest version from:
